

ABSTRACT

5 A work platform (10) for performing work operations on an object such as roof
construction work including an upper surface (15A) for working on the roof and a lower
surface (15B) for storage of work material, the step between the work surfaces (15A,
15B) comprising an elongate material transfer section (19), and the upper work surface
10 (15A) including a covered roof access section (11). The platform can also be used for
access to perform maintenance work on aircraft, railway carriages, etc. The invention
also provides method of performing work operations utilising the work platform (10).
